

S5 Image News - Edited

Written by Administrator

Thursday, 14 January 2010 08:03 - Last Updated Friday, 25 June 2010 17:42

The S5 image news first released with emma smooth has been edited to fit the style of Political and released along side it. Continue reading below for a full tutorial and check out the homepage of the political template for a demo of the module.

The S5 Image News module is the image module demo'd at the top of this page.

List of Features:

- Set height and width for module and text
- Pulls content from up to 10 published content articles
- Choose ordering by random, most recent, ordering, most popular, etc.
- Set lengths of titles and text
- Full control of text padding
- Choose from any colors you wish
- Set your own display times
- Choose fade and slide or just fade for transition effect
- Play, pause and direct links to each article through thumbnail images
- Hyperlink directly to the content page
- Fully powered by S5 Effects

I like what I see! I want to [JOIN TODAY](#) .

Setting up the module:

Adjust the settings as desired in the module manager. Change your layout, width, height transition speed, text lengths, colors, etc. to whatever settings you wish. Once you have completed this it's time to enter the images into your content items.

Tagging an image to a content item:

- Edit any content article that you wish and look for the html source button, most editors will look similar to this:
